PROFESSIONAL SUMMARY

Full Stack Developer with professional experience building business applications and hands-on experience developing full-stack applications with Python, Django REST Framework, and React. Experienced in REST API design, relational data modeling, JWT authentication, RBAC, asynchronous processing with Celery/Redis, transactional workflows, and automated testing. Strong background in delivering CRM, eCommerce, POS, and business management systems, with production experience in Laravel/PHP and recent full-stack Django/React projects.

TECHNICAL SKILLS

Backend: Python, Django, Django REST Framework, Celery, Redis, Gunicorn, REST APIs
Frontend: React.js, TypeScript, JavaScript, Vite, HTML5, CSS3, Tailwind CSS
Auth & APIs: SimpleJWT, RBAC, Custom DRF Permissions, CORS
Database: PostgreSQL, MySQL, Django ORM, Relational Design, Query Optimization
Testing & Tools: pytest, Vitest, Git, GitHub, GitHub Actions, CI/CD
Also: PHP, Laravel, Eloquent ORM, Inertia.js, Bootstrap

SELECTED DJANGO PROJECTS

Inventory Management System **GitHub**
Django, DRF, SimpleJWT, Celery, Redis, MySQL, React, TypeScript, Vite, Tailwind

- Architected a multi-warehouse inventory API with Django REST Framework covering purchase orders, sales (reserve → complete), transfers, adjustments, and reporting, consumed by a React admin SPA.
- Modeled stock with the Django ORM using an immutable ledger and balance tables updated inside `transaction.atomic`; tracked reserved quantity separately from on-hand so sales holds never corrupt ledger history.
- Prevented overselling under concurrent receives/sales with `select_for_update` row locking on stock balances in Django service workflows.
- Implemented SimpleJWT auth with five Django group roles and custom DRF permissions for fail-closed warehouse scoping (users access only assigned warehouses).
- Integrated Celery and Redis for async low-stock alerts and dashboard caching; exposed CSV/Excel report exports through DRF endpoints.
- Validated critical Django paths with pytest (concurrency races and role/permission boundaries) and Vitest on the React client.

Hospital Management System **Github (API | Frontend)**
Django, DRF, SimpleJWT, django-filter, React 19, Vite, Tailwind, Axios

- Built a decoupled hospital management API with Django REST Framework and a React SPA, organizing domain modules for departments, doctors, patients, appointments, prescriptions, medicines, and billing.
- Implemented SimpleJWT authentication and DRF role-based permissions for Admin, Doctor, Patient, and Receptionist access patterns.
- Encoded appointment lifecycle rules (pending, approved, completed, cancelled) with serializer/API-level validation in Django.
- Delivered searchable, filterable, and paginated REST endpoints using DRF ViewSets and django-filter.
- Integrated the React client with protected routes, role-aware navigation, and Axios-based API consumption against the Django backend.

PROFESSIONAL EXPERIENCE

Full Stack Developer Jan 2025 - Present
SquartUp *Remote*

- Designed and shipped a multi-module CRM, POS, and eCommerce backend (eclipseautoparts.com) with relational data models, role-aware workflows, and account health analytics (Account 360, churn risk, health monitoring).
- Built scheduled backend jobs for daily customer analysis pipelines, reducing manual reporting effort and supporting data-driven operations.
- Developed reusable dashboard modules for Laradashboard (laradashboard.com | GitHub) — backend services, database schemas, and React UI components for plug-and-play feature delivery.
- Collaborated remotely with clients to translate business requirements into scalable, maintainable APIs and codebases (Laravel/PHP stack in production).

Lecturer May 2022 - Apr 2025
Department of CSE, Royal University of Dhaka *Dhaka, Bangladesh*

- Delivered undergraduate courses in Web Development, Software Engineering, and Data Structures & Algorithms, with emphasis on Python, JavaScript, and backend/web fundamentals.
- Mentored 120+ students in full-stack practices, Git/version control, API design, and modern UI principles.
- Supervised 15+ final-year capstone projects from ideation through implementation and deployment.

Data Analyst Intern Mar 2019 - Jun 2019
HappyFresh Malaysia *Kuala Lumpur, Malaysia*

- Built interactive dashboards and reports with Tableau and Redash to support operational decision-making.
- Designed ETL pipelines across multiple data sources and automated recurring reporting to cut manual effort.
- Partnered with marketing, sales, and finance teams to define KPIs and surface actionable business insights.

Research Assistant Aug 2018 - Feb 2019
Faculty of Computing & Informatics, Multimedia University *Cyberjaya, Malaysia*

- Built deep convolutional models for ECG signal compression and reconstruction in Python (TensorFlow/Keras).
- Performed data engineering on large ECG datasets and benchmarked results against established methods; co-authored technical reports with the research team.

CERTIFICATION

Full Stack Web Development with Python, Django & React 2026
Ostad ***View Certificate***

EDUCATION

Bachelor of Computer Science Jul 2016 - Jul 2019
Multimedia University *Cyberjaya, Malaysia*
Thesis Title: Hybrid Models For The Compression Of Electrocardiogram (ECG) Signals (Design And Development of Non-Linear Models)

Foundation in Information Technology Dec 2014 - May 2016
Multimedia University *Cyberjaya, Malaysia*

Bachelor of Science, Leather Engineering Apr 2014 - Oct 2014
Khulna University of Engineering and Technology *Khulna, Bangladesh*
Completed one semester before receiving a scholarship to pursue higher education in Malaysia.

Higher Secondary Certificate (HSC), Science 2013
Shahid Syed Nazrul Islam College

AWARDS & ACHIEVEMENTS

Yayasan Khazanah Asia Scholarship 2014 - 2019
Khazanah Foundation *Kuala Lumpur, Malaysia*

Dean's List Award 2015, 2016
Multimedia University
